

## **ABSTRACT**

In an implementation of user interface start page, the start page includes a user-identifiable indicator associated with a user of a computing system to indicate that the user is logged-on to the computing system. The user interface start page also includes user-selectable controls from one or more regions of a user interface desktop page which is displayed after a transition from the user interface start page to the user interface desktop page. Each of the user-selectable controls on the user interface start page initiate a display of information associated with the user when selected.
